Award-winning products

Prime Design Europe is one of the market leaders in the design of patented roof racks. Prime Design Europe designs and manufactures innovative and patented products (AluRack®, ErgoRack™ and GlassRack®).

Prime Design Europe is now also the new exclusive distributor of the products of Fire Research Corporation, the American market leader in scene lighting and foam management for fire engines. A new department is being created to accommodate these products alongside the existing roof rack systems.

Prime Design Europe distributes its products via partners such as bodywork manufacturers, auto garages and commercial vehicle outfitters, and is one of the leading roof rack specialists in Europe. Prime Design Europe maintains branch offices in Poland, the United Kingdom, Italy, Russia, Germany and France to support local customers and dealers in these countries. Design, manufacturing and assembly take place in our European headquarters in Belgium, where our large storage capacity ensures speedy delivery.

Prime Design Europe is a partner in the Austrian initiative for safe transport: www.sicher-transportieren.eu

Prime Design Europe was selected as the official partner of the "Van Excellence Code", which is designed to improve standards compliance among users of vans.

With our ISO 9001:2008 quality management system, we guarantee you that the highest standards are applied to the sale and distribution of our products. We have defined the appropriate benchmarks for each step in the production and order process. This allows us to evaluate the quality of the work we deliver on an ongoing basis.

OTHER PATENTS PENDING

versatile - strong - safe transport!

Glass and windows should be transported in the safest and most reliable way. With its unique glass retaining system, the certified **GlassRack** from Prime Design Europe is a rack for daily use. It is light, strong and guarantees safe transport. It can be mounted outside and inside of vehicles or onto beds of trucks. Any LCV model can be equipped with this versatile **GlassRack**.

patented - flexible - ergonomic!

PATENTED RETAINER BARS

The specially designed glass retainer system distinguishes **GlassRack** from competitors: glass of different thickness can be secured at once. The droparms are optimised to bring the right pressure onto each individual piece of glass. You don't have to adjust the depth at the base of the **GlassRack**, because there is only one size! The droparm keeps your load safely in position.

The sleeve keeps the droparm in an upright position into the retainer bar.

Lift the sleeve and the droparm tilts towards the glass

Release the sleeve and it slides down, locking the droparm on to the glass.

How do you operate the glass retainer bar?

1. Pull the retainer bar outwards
2. All arms will fall slightly forward
3. The sleeves will slide down locking the arms, which keep now the pretensioned position.

MODULAR SYSTEM

GlassRack consists of several components which are easy to assemble. This modular system offers you many advantages:

1. **GlassRack** components are easily packed and shipped. Parts can be added and exchanged any time.
2. One person can preassemble the **GlassRack** and install it on the vehicle.
3. **GlassRack** can be moved to your next van - and to the next again. The modular system can easily be adapted to a new van and made larger or smaller.

Due to its ease of installation/uninstallation, its high carrying capacity and its modular nature, **GlassRack** has a long life span.

EXTRA STURDY FRAME

The rubber-covered horizontal and vertical supports build the sturdy, stable and safe frame of the **GlassRack**. Also the rubber supports and wedges located at bottom and the far end of **GlassRack** guard the edges. It is possible to position retainer bars closer to each other, which enables the safe transport of smaller pieces of glass.

THE STRONG LIGHTWEIGHT

The aluminium **GlassRack** is lightweight and durable, yet strong and safe. The loading capacity of max 300kg can be efficiently used. The economic transport avoids glass damages and saves you time and money.

On the following pages, explore the wide range of models and find out which meets your vehicle and your requirements.

GlassRack Outside

for the exterior of vans

The **GlassRack**, which is installed outside of the vehicle, is always combined with our aluminium crossbars on the roof. This type of **GlassRack** is available in a Standard and an Advanced version.

Installation
without
drilling!

Save costs on an easy and quick installation. Only one person is needed to assemble and install the **GlassRack** on your vehicle without drilling, which greatly enhances your vehicle's residual value in case of leasing.

STANDARD

This costefficient Standard **GlassRack** is equipped with the rubber-covered frame (with horizontal and vertical supports) and two retainer bars. Additional retainer bars and a wide range of accessories can be ordered.

ADVANCED

This extended version has an aluminium mudguard and foldable board, to protect the loading against dust and dirt. Extra vertical bars are included for transporting different sizes of glass and panels. Additional accessories make your **GlassRack** still more flexible (see page 11).

GlassRack Inside

The Inside-Solution

GlassRack Inside is the solution of choice when windows and glass must be protected from rain and dust during transport. All models have the same frame with horizontal and vertical supports like the Outside version. Depending on your specific needs, there are three different Inside versions for your choice:

ECO

With the ECO version windows and facade plates are well secured for transport. According to the depth of your load you set the bar into the proper position in one of the grooves of the supplied wooden floorboard and secure with straps.

STANDARD

Our **Standard Inside** version provides all advantages of the Outside version. However you protect inside against dirt and theft. The installation is effected on the floor and at existing mounting-points of the body. The size of your **GlassRack** depends on wheelbase and roof-height.

PULL-OUT ergonomic

The **Ergonomic Inside** version offers an essential ergonomic advantage for (un)loading. Two-thirds of **GlassRack** can be pulled out of the vehicle and gives easy access to your load. This convenient unloading system relieves your back and shoulders of unnecessary stress - especially in case of repeatedly loading and unloading.

GlassRack Platform A

for open loadbeds and trailers

For your flatbed truck we offer you the right **GlassRack** solution. Several options are available: alongside and/or on top of the flatbed and on one or both sides of the vehicle. Our modular system provides you the right solution meeting your vehicle's and your requirements.

GlassRack accessories

GlassRack also offers the flexibility of installing extra accessories, and it is also possible to order additional retainer bars or other individual replacement parts for your glass rack. We give a 3 years warranty and according to the individual serial number we can easily provide the right spare parts if needed.

Ladder

Rungs can be added to the **GlassRack** so as to equip it with a ladder. The ladder is installed without drilling into the body.

Roller

The roller is easy to install in the rear of the luggage carrier and makes it easy to load and unload long objects.

Aluminium Conduit Tube

Conduit tube (2 - 5 m long by 125mm squared), lockable on both sides. Mounting with a bracket onto crossbars, so that the interior space can be completely used for loading.

Stop plate

The stop plates are totally strong and easily removable. Should the load shift, for example in an accident, they act as an extra safety measure to prevent the glass from sliding forwards off the rack. They also alert other road users of the extra width of your vehicle and hazardous load.

Adjustable safety stop

The safety stop provides extra protection during abrupt braking. Two separate safety stops let you create different levels in your **GlassRack** so that you can work at different heights and smaller pieces of glass can be placed above each other.

Storage for retainer bars.

This hook enables you to store all the bars of the rack in one place when they are not in use.

Roof rack systems

ErgoRack is the safest, quickest and most ergonomic way to transport ladders on your van. The patented design is operated from the ground with an ergonomic handle. Independent of the height of the vehicle, this ladder lift brings the ladder easily up and down from the roof.

AluBars and **AluRack** are our basic racks made from lightweight yet sturdy aluminium. **AluRack Pickup** is the perfect solution if you want to maximise space in the back of your pickup. **AluRack Construction** is the heavy duty **AluRack** solution with more strength but without excessive weight.

ErgoRackTM
"PRIME DESIGN"

Van Inside protection

Our growing range of solutions guarantees an optimum protection inside your vehicle's loading area. We now offer floors and sidewall panels - made in our own professional production. And for more safety against theft we supply steel window grilles.
